

**REPORT TO THE LEGISLATURE**  
**Pursuant to P.A. 63 of 2011**  
**Section 806(2)**  
**HIV, Hepatitis C Testing Report**

Section 806(2): By March 1, the department shall report to the senate and house appropriations subcommittees on corrections, the senate and house appropriations subcommittees on community health, the senate and house fiscal agencies, and the state budget director on the number of offenders tested and the number of offenders testing positive for HIV, the hepatitis C antibody, or both, at prison admission and parole, transfer to community residential placement or discharge on the maximum sentence. The following data summarizes these reports for calendar year 2011.

**HIV**

10,372 HIV tests were performed upon intake. Of that total, 65 tests were positive.

During 2011, 110 prisoners paroled/discharged that were positive for HIV.

**Hepatitis C**

10,424 hepatitis C tests were performed upon intake. Of that total, 862 tests were positive, and 140 tests were indeterminate.

During 2011, 1,165 prisoners paroled/discharged that were positive for hepatitis C.

**HIV/Hepatitis C**

Included in the totals above are 8 prisoners who tested positive for both HIV and hepatitis C upon intake.

There were 23 prisoners who tested positive for both HIV and hepatitis C upon parole/discharge.

**Notes:**

- 1) These totals do not reflect the number of refusals.
- 2) "Discharge" as used in this report includes discharged on the maximum sentence without parole and discharge on the maximum sentence after parole and return.
- 3) Prisoners are tested for HIV and HEP C within 90 days prior to parole. However, if they have a previous positive diagnosis of HIV or HEP C re-testing prior to release is not required. Therefore for calculation purposes the number of prisoners released with a positive diagnosis of either HIV or HEP C was counted rather than the actual number of tests performed at time of release.
