

HIV Among Women, Michigan

Number of Cases and Recent Trends:

- In Michigan, it is estimated that 4,230 females are infected with HIV.
- Women account for 23 percent of the infected population in Michigan.
- Between 2004 and 2008, HIV diagnoses for women have decreased an average of 6 percent per year.

Demographics:

- The majority of female HIV infections are in black women (73 percent).
- 1 in 300 black females are living with HIV, this is over 18 times the rate among white females.
- Sixty-one percent of females living with HIV statewide have a heterosexual risk factor, while for females in the Detroit area it is 58 percent.

Other Facts:

- Between 2004 and 2008, the rate of infection decreased among black females an average of 9 percent per year, which explains the 6 percent per year decrease for all females.

Heterosexual Risk in Females by Race/Ethnicity, Michigan

Program Efforts:

- Women account for 23 percent of persons receiving publicly funded HIV care services. MDCH operates the Ryan White Part D program which services Women, Infants, Children, and Youth. A variety of services are offered to women including medical care and family-centered case management services as well as the Perinatal HIV Clinic which serves HIV-positive pregnant women.
- In 2009, 46 percent of HIV testers at publicly funded sites were women.
- The MDCH funds community-based organizations for women at high risk for HIV due to IDU and commercial sex work.
